(a) busy cores
busy cores U = CPU time / elapsed
worker threads p
n = 512
n = 1024
n = 2048
n = 4096
U = p (at most 10)
ikj (sequential)
(b) efficiency-core share
share of CPU time on E cores (%)
4 busy threads on P cores,
the rest on E cores
(c) mean clock of the busy cores
cycles / CPU time (GHz)
(d) cycles per multiply-add
cycles per multiply-add (all cores)
